

New Final Workbook: Consolidated Dashboard and Status Tracking Layer

How it was improved:

Compared with the legacy reporting process, this workbook consolidated what had previously been split across the intermediate workbook, the report workbook, and multiple manual formatting and handoff steps. Snapshot comparison, dashboard shaping, status tracking, helper-query support, and user-facing reporting behavior were brought together into a single automated reporting experience.

The revised Extract workbook:

- Orchestrates queries
- Incorporates extract snapshot-to-current-state comparison
- Performs dashboard-oriented data shaping
- Preserves manual status changes through refresh
- Designed with data systems and end user-experience principals
- Integrates reporting and source-system feedback loops
- Executes writeback to source data functionality
