

New Extract Workbook: Dynamic Snapshot and Metrics Layer

How it was improved:

Compared with the legacy Extract workbook, the redesigned version reduced query clutter, replaced static date handling with dynamic logic, and moved supporting metrics into reusable query outputs. This made the Extract workbook easier to maintain, more reliable as an upstream source, and far better aligned to the needs of the consolidated Final dashboard.

The revised Extract workbook:

- Turned a cluttered query chain into a modular pipeline
- Replaced manual date handling with dynamic parameter logic
- Centralized summary metrics into query outputs instead of worksheet formulas
- Reduced downstream cleanup by moving logic upstream
- Made the extract workbook a cleaner input source for the redesigned final dashboard
