

Legacy Extract Workbook: Baseline Snapshot Layer

How to Improve:

For the redesign, the Extract workbook was aim to be a cleaner, modular snapshot layer with dynamic date logic, simplified filtering, and reusable output tables for counts and reporting-window dates. This will make the baseline extract easier to maintain, reduced unnecessary transformations, and turned it into a much cleaner upstream input for the Final workbook.

Improvements Goals:

- Simplified the base query structure
- Reduced unnecessary columns and redundant transformation steps
- Replaced static date handling with dynamic parameter logic
- Generated reusable dates and counts for dashboard pull-through
- Improved maintainability and reduced downstream cleanup needs
